David Morgan-Gumm

Data & AI Engineer

Manchester, UK | +44 7949 905787 | davidmorgangumm@gmail.com | linkedin.com/in/david-morgan-gumm-450751133 | dmg.sqlsquared.co.uk

PROFILE

I've spent eight years building data platforms on Azure, starting out on SQL warehouses and most recently on Microsoft Fabric. I was promoted three times at Oliver James and finished as Data Platform Manager, running a team of six. I moved back to hands-on work at Brabners because AI is going to be so important to how applications get built, and I wanted to experience it properly as a developer before going further into senior management. Outside work I run the sql_squared data community and build Echelon, a web app for tabletop gaming groups.

SKILLS

Data: Microsoft Fabric, Azure Synapse, Azure Data Factory, Azure Data Explorer, SQL Server and Azure SQL, Power BI, Tamr, medallion architecture, dimensional modelling

Languages: SQL (T-SQL), Python, PySpark, KQL, TypeScript, C#

Cloud: Azure (Functions, Logic Apps, Key Vault), Google Cloud Platform (Cloud Run, Firebase Hosting)

DevOps: GitHub Actions, Azure DevOps pipelines, Bicep, Docker, automated testing

AI: Claude Code and agentic development, Microsoft Foundry, Azure AI Language

Apps and integration: React, Next.js, Node.js, PostgreSQL, REST and GraphQL APIs, Salesforce, SAP Business ByDesign

EXPERIENCE

Data & AI Engineer, Brabners, Manchester — Aug 2026 – Present

- Built and launched Central Intelligence Tools (Next.js, TypeScript). Around 400–500 people use it to open new matters and set up everything they need to work on them.
- Delivered a new analytical SQL data warehouse on a medallion architecture, now in production with two source systems feeding a full Power BI reporting suite. More of the firm's systems are next, then master data management and a move to Azure.
- Set up CI/CD in GitHub Actions with automated tests. Infrastructure is defined in Bicep, with branch protection and pull request policies switched on.
- Brought Claude Code and agentic development into a four-person dev team as part of the firm's AI strategy. Nothing gets merged without passing tests, CI checks and a pull request review.

Oliver James, Manchester — **Feb 2021 – Jul 2026**

Data Platform Manager — Nov 2023 – Jul 2026

- Ran a team of six data engineers and developers, one of them a manager, and owned the roadmap for data and development.
- Mentored two junior engineers through to promotion.
- Moved the data platform off Azure Synapse and onto Microsoft Fabric (OneLake, Lakehouse, PySpark notebooks, Bicep), which improved data quality and master data management a great deal.
- Delivered master data management with Tamr on Fabric for over 1 million people and company records. It cut duplication by 20–30% and pushes golden records to downstream systems through events and APIs.
- Built daily LinkedIn job-market analytics in Azure Data Explorer, with Azure AI Language picking out skills and industries from job postings for whitespace reporting on unmet talent demand.
- Brought in a development change board and a release plan the business could see, and tightened up sprint ceremonies, to stop ad-hoc requests eating into planned work.
- Managed the outside implementation partners on enterprise application suites and public-facing apps, and wrote the requirements for the business-critical integrations.

Data Engineering Lead — Oct 2022 – Oct 2023

- Set up the DevOps function from scratch. Azure DevOps YAML pipelines took all software, data and AI resources from manual releases to fully automated deployment, and deployment time dropped by 80%.
- Built an event-driven reporting suite that got telephony call statistics from five countries to management within seconds, and later added AI summaries of call transcriptions using Microsoft Foundry.
- Wrote the long-term data strategy with senior leadership, aimed at getting data into core business processes.

Senior Data Engineer — Oct 2021 – Sep 2022

- Designed and delivered a new Azure Synapse data platform (Data Lake Storage Gen2, Data Factory, dimensional models) used by 1,000+ people in 12+ countries.
- Connected the legacy finance systems to a new SAP Business ByDesign ERP, working with third-party consultancies. Automated validation and reconciliation kept data accuracy at 99.9%.
- Designed the Salesforce integration, with custom SOQL delta-loading sales activity into the data lake that core business reporting runs on.

SQL Developer Feb 2021 – Sep 2021

- Built a cloud-first SQL data warehouse while the business was growing fast. That meant reverse-engineering the legacy systems so key business logic wasn't lost.

SQL Developer & Software Tester, Evolution Recruitment, Warrington Jul 2018 – Feb 2021

- Extended the SQL data warehouse behind the in-house CRM.
- Worked on the business's first move to an Azure data stack.
- Recognised by the business for improving the software's usability and reporting.

PROJECTS AND COMMUNITY

Founder, SQL Squared Ltd (alongside employment) 2024 – Present

- **Echelon** (echelon.sqlsquared.co.uk). A live web app that replaces the spreadsheets tabletop Crusade groups use to run their campaigns. It has free and paid tiers and its own Discord community.

  Written in TypeScript with React, Express, Supabase Postgres and Drizzle ORM, with Stripe for billing and Vitest for tests. Runs fully on Google Cloud Platform using Cloud Run and Firebase Hosting. Pair-programmed with Claude Code, keeping the architecture and the review of every change myself.
- **sql_squared** (sqlsquared.co.uk). A community for data and AI people. Host a podcast with industry practitioners and publish articles and YouTube videos.

Redgate Community Ambassador May 2025 – Present

- Give feedback on Redgate's database DevOps tools, write about them and go to their events.

EDUCATION AND CERTIFICATIONS

BSc (Hons) Computer Science, 2:1, University of Liverpool 2018

Level 5 Management and Leadership, Chartered Management Institute 2026

Microsoft Certified: Azure Fundamentals (AZ-900), Microsoft 2019
